Spring 2024
Tues, Thurs 12:30-1:45pm
Rolfe 1200
Student hours: Tues 2-4pm

This course provides a political economy approach to the puzzle of why some countries are rich and others are poor, and why, among the latter, some have been able to achieve rapid rates of economic growth and improvements in their citizens' well-being while others have not. This is perhaps the central question in the study of development, and we approach it by reviewing and explaining the logic behind some of the most important arguments that have been advanced to account for differences across countries and communities in their rates and levels of economic development.

The first half of the course looks at theories that emphasize the role of the state in economic development—theories that can be applied to both Europe, historically, and the Global South today. We begin at the simplest level with the problem of achieving order and prosperity in stateless societies. Then we discuss the deep sources of development such as geography and factor endowments. Then we bring in the state and explore its role as a protector against violence and predation, a guarantor of property rights, a coordinator of economic policies, and an investor in productive enterprise, and we show how each of these roles contributes to economic development. But because a state that is strong enough to do such things is also strong enough to implement policies that run against the public interest, we then take up a discussion of the ways in which the state can stand as an impediment to development, and also how it might be reined in via political institutions.

The second part of the course focuses on issues confronting the Global South today. We consider the critical issues of conflict, gender, and the role of leadership. We then look at how exchanges with other countries—via trade, migration, and international capital flows (including investment and foreign aid)—affect the logic and process of development. We conclude by examining four approaches to promoting development that, in various moments, have each been embraced as “the answer” to generating improvements in the well-being of the poor: decentralization, informational campaigns, the Millennium Villages Project (the embodiment of Jeffrey Sachs' “Big Push” logic), and unconditional cash transfers. We discuss the motivations that lie behind each of these interventions and their (mixed) record of success.

TEACHING OBJECTIVES

By the end of the course, students will have acquired a deeper understanding of the sources of economic development and the reasons why some countries and communities have achieved higher rates of economic development than others. Students will also be introduced to the variety of approaches that social scientists employ to study political and economic development, and to a number of leading topics in the development literature.

COURSE REQUIREMENTS

The course is taught in two lectures each week, on Tuesday and Thursday from 12:30pm to 1:45pm in Rolfe 1200. Attendance at lectures is mandatory.

Students are required to take a take-home midterm, an in-class midterm, and a cumulative final exam. Students are also required to attend and participate in weekly discussion sections. Each part of the midterm is worth 25 percent of the final grade, the final exam is worth 35 percent, and section participation is worth the remaining 15 percent.

- The in-class portion of the midterm will be taken in class on May 2.
- The take-home portion of the midterm will be distributed at the end of lecture on May 9 and due (via Turn-it-in) at 8pm on Friday, May 10.
- The final exam will be on Tuesday, June 11 from 11:30am-2:30pm. *Students who are unable to take the final exam at that time and date should not enroll in the course.*

The course involves a fairly heavy reading load, the completion of which is essential to understanding the issues and controversies addressed in the lectures. There are no required books for purchase. All of the readings are posted on the course's BruinLearn page (UCLA log in required) and are available for your own use.

OTHER NOTES AND RESOURCES

Academic integrity: As a student and member of the UCLA community, you are expected to demonstrate integrity in all of your academic endeavors. Accordingly, all work you do will be held to the highest ethical and professional standards. Violations of academic integrity include, but are not limited to: cheating, fabrication, plagiarism (**including the use of AI platforms such as ChatGPT**), multiple submissions, or facilitating academic dishonesty.
